CDF Europe

Bag-in-Box approved for UN performance

Innovation is critical to the success of manufacturing in Switzerland. Swiss-based packaging producer, CDF Europe, is taking this innovation to the marketplace with the first flexible bag-in-box approved for UN performance packaging. The "Cheertainer" bag-in-box is used throughout the lubricant, detergent, chemical, and food/beverage industries.

The package is approved for UN transport in 10L and 20L, but is manufactured from 5L through 25L. In addition to its UN certification, the Cheertainer bag-in-box benefits customers in a number of ways, targeting sustainability, quality and cost saving:

- 20L Cheertainer reduces waste-disposal costs by 86% versus rigid packaging
- 20L Cheertainer is 400% more efficient in storage/warehouse than 4L plastic bottles
- 1 truckload of plastic drums (20L) is equivalent to 1 pallet of Cheertainer, saving in logistic, fuel and transportation costs.
- Manufactured in clean-room, using smart seal technology to ensure quality production.

Innovation is critical in consumer and industrial packaging. CDF Europe, producer of the UN rated "Cheertainer" bag-in-box system, is at the forefront of packaging innovation in Switzerland and Europe.
